- High Level** When the sensor detects motion the dimming control output ramps up to the selected HIGH light level.
- Low Level** After the sensor stops detecting motion and the time delay expires the dimming control output fades down to the selected LOW light level.
- Time Delay** The selected time period that must elapse after the last time the sensor detects motion for the electric lights to fade to LOW mode
- Cut-Off** The time period that must elapse after the lights fade to Low mode and the sensor detects no motion for the electric lights to turn OFF.
- Ramp Up** Time period for light level to increase from LOW to HIGH.
- Fade Down** Time period for light level to decrease from HIGH to LOW.

** Only Available for OSDL/IR
